Autonomous AI Agents Will Control Capital.

Software Is Moving Money **Without Guardrails**.

When an AI agent loses your money, there's no refund, no insurance, and no one to call. Agents hold private keys, execute transactions autonomously, and face zero enforceable safety checks. **The user bears all the risk.**

Introducing Callipsos: **Nothing Executes** Without Passing Through Us.

Six Layers Of **Defense**

Translate user-defined rules and limits

Policy Engine

Decode what the transaction actually does

Calldata Decoding

Fork-simulate before execution

Transaction Simulation

Signed, verifiable proof on-chain

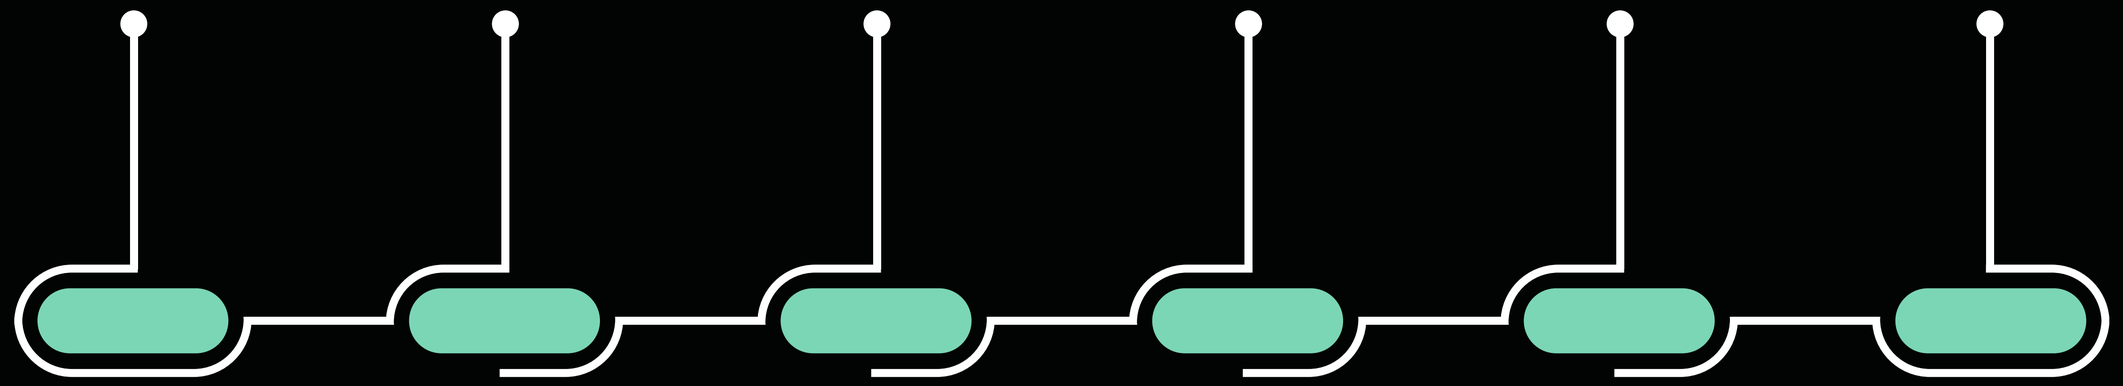
Cryptographic Attestation

Detect bad agents by pattern

Behavioural Analysis

Network-wide threat detection

Cross-Agent Intelligence



Layers 1–2 in active build. Architecture designed for all six to strengthen independently.

Why Now?

Because The **Damage** Has Already Started.

550+

Crypto AI Agent projects live. Agents are getting wallets and managing capital autonomously.

$170B+

Total Value Locked in DeFi, with no agent-aware safety layer protecting it.

$3.4B+

Lost to DeFi exploits in 2025. AI introduces new risks: Prompt Injection, malicious plugins.

The Opportunity

SAM

$4.8B+

AI agent security & validation infrastructure. Every agent moving money needs a safety layer.

TAM

$800M–$1.2B

Agent transactions across Ethereum, Solana, BNB, Base, Arbitrum. $100B+ combined DeFi TVL.

SOM

$3–5M ARR

Year 3 target. Starting on Base/EVM. 2–3 framework integrations, ~5,000 agents.

Where We Are

Product

System Architecture validated and documented.

Core Policy Engine designed.

Tech Stack Locked: Rust, PostgreSQL, Lit Protocol, Base Network.

Currently in active build.

Validation

20+ customer discovery conversations completed.

10 beta users identified and committed for launch.

Inbound investor interest before any fundraise announced.

Partner conversations in progress

How We Make Money

Phase 1: Earn Trust

% of yields earned. We only make money when the user does. Builds credibility and generates real usage data.

→

Phase 2: Developer SDK

Usage-based pricing developers pay per agent protected. Agent frameworks ship with Callipsos built in.

→

Phase 3: Infrastructure

Enterprise licensing and protocol integration fees. Callipsos evolves to a Cross-Agent Threat Intelligence system.

Phase 1 optimizes for **trust** and **data,** not margins. The path to profitability runs through Phase 2.

The Landscape

Privy, Safe, ZeroDev

Give agents wallets and scoped permissions. No policy logic about what's actually safe in DeFi.

Okta AI, Daydreams AI

Smart governance and agent frameworks, but not built for DeFi-specific risk.

Account Abstraction Tooling

On-chain constraints for DeFi but no intelligence: Can limit which contract, can't evaluate whether it's safe.

Callipsos Network

DeFi-native policy engine + cryptographic enforcement + cross-agent threat intelligence.

Wallet providers give agents **keys.** Frameworks give agents **brains.** Callipsos gives agents **judgment.**

Why Us

Cynthia Kamau

Founder,

Team Lead

Ex Nethermind,
Polkadot Blockchain Academy.
Maintained infrastructure managing 2000+ nodes across the Polkadot ecosystem.

Andrew Miracle

Co-Founder,

Technical Lead

Ex-infrastructure engineer at YC, Techstars & OpenAI-backed companies.
Built analytics platform adopted by Mastercard Foundation.

Christine Okoth

Co-Founder,

Full Stack Developer

Ex-Rust Engineer Carbon Crowd.
Built the carbon footprint tracking infrastructure for the entire ICP protocol monitoring all 29+ SNS networks.

The Ask

Opening a $150K pre-seed to:

Do deep customer discovery and user research.
Add a DeFi strategy specialist on the team.
Product iteration with 10 committed beta users.
Do an independent security audit to ready for mainnet launch.

We're looking for:

Pre-seed investors who want early positioning in agent safety infrastructure.
Design partners: agent framework teams and DeFi protocols across major chains.

The agent safety category is being defined right now. First movers will set the standard.

Callipsos Network.

Always Watching.

Always Protecting.
